APPL DATE: November 28, 1995

INT-CL(IPC): A21D013/08, A21D002/36

ABSTRACT

PROBLEM TO BE SOLVED: To obtain a food good in mechanical compatibility with rotary molders, etc., and good in texture by molding a biscuit dough prepared by adding wheat flour to roasted wheat flour.

SOLUTION: (A) Wheat flour is added to (B) roasted wheat flour to impart a proper viscosity to the dough used in a biscuit-molding process. The component B is used in an amount of preferably ≥ 75 wt.% based on the whole wheats, and gives biscuits (including cookies, crackers, etc.) enabling to satisfy

the aspects of textures, such as good solubility in mouths and
crispy texture.
